

Conflict Eval Comparison: GPT-4.1 vs Claude Sonnet 4

Both models show **perfect classification performance** on your conflict detection task, with identical accuracy metrics across multiple runs. Here's the detailed comparison:

🎯 Performance Metrics (Most Recent Successful Runs)

Metric	GPT-4.1	Claude Sonnet 4	Winner
Precision	1.0 (100%)	1.0 (100%)	Tie
Recall/TPR	1.0 (100%)	1.0 (100%)	Tie
Specificity/TNR	1.0 (100%)	1.0 (100%)	Tie
True Positives	57	57	Tie
True Negatives	30	30	Tie
False Positives	0	0	Tie
False Negatives	0	0	Tie
Errors	0	0	Tie

⚡ Execution Speed

Model	Duration	Speed Advantage
GPT-4.1	44.3s	3.5x faster ⚡
Claude Sonnet 4	156.4s	—

📊 Consistency Across Runs

Both models demonstrate **high consistency**:

- **GPT-4.1:** 4/5 recent runs achieved perfect scores (1 early failure with 87 errors)
- **Claude Sonnet 4:** 4/5 recent runs achieved perfect scores (1 early failure with 87 errors)

💡 Key Insights

Quality: Both models are equally capable for this conflict detection task, achieving perfect classification with zero false positives or false negatives.

Speed: GPT-4.1 is significantly faster (44s vs 156s), making it **3.5x more efficient** for the same workload.

Recommendation: Given identical accuracy but substantially better speed, **GPT-4.1 is the better choice** for production deployment unless you have specific reasons to prefer Claude (e.g., cost, rate limits, or other non-performance factors).
